Webpage

10 points

Your task is to create a HTML5 valid webpage with CSS. You have to check with the <u>html validator</u> and <u>css validator</u>.

You can get points according to the following rules:

- Must-haves, you cannot get more than 3 points if you miss any of these:
    - ◆ Have a main page (`index.html`) and a separate CSS file linket to it (1 point)
    - ◆ Fill it with some non-random, meaningful, unique content (1 point)
    - ◆ Put the link of both of the validators into your webpage, for example on the bottom of my page: [1] (1 point)
- Optionals
    - ◆ At least two titles (h1, h2,...) (1 point)
    - ◆ Use links (link within your page and between different webpages) (1 point)
    - ◆ CSS selectors (like class, id, hover, 1 point)
    - ◆ Make a tabular with at least 12 cells, for example your weekly schedule (1 point)
    - ◆ If you make it non-trivial that's one extra point: merged cells, custom borders
    - ◆ Put up an other html page next to `index.html`. Put a link from the main page to this page and back to the main page. That page have to be valid as well with the validator (1 point)
    - ◆ Use pictures, locally, not with global link (1 point)

Handing in

The webpage should be available at

```
http://www.math.bme.hu/~<username>
```

If you are done, send the link to the usual address (*info1hazi@gmail.com*) and subject (like this: `T0_HW4_borbely`).

Deadline

2018. October 23rd 23:59
